LAN COMMUNICATION TEST

1, Explain uses of ping command in network ?

Ping is used to test network connection between two System It uses ICMP Echo Request and Echo Reply to test connection, response time between sytems, and packet loss during ping.

Example: Ping 40.35.0.2

2, Explain netbios protocol ?

NetBIOS (Network Basic Input/Output System) is used for communication between computers on a local network. It provides name resolution, session communication

3, Explain SMB protocol ?

SMB (Server Message Block) is a network protocol used for sharing files, folders, printers, and other resources between computers over a network.

4, Explain ping process from 50.0.0.10 to 50.0.0.20 ?

When 50.0.0.10 pings 50.0.0.20, the source first uses ARP to find the destination's MAC address. It then sends an ICMP Echo Request to 50.0.0.20, which responds with an ICMP Echo Reply. The source receives the reply and confirms connectivity.

ping 50.0.0.20

Source IP: 50.0.0.10

Destination IP: 50.0.0.20
